

Research Presentation (5%)

Prepare a 15 minute PowerPoint presentation describing results of your work on Project 6. Include information about the problem you decided to work on and describe experiments you have performed as well as any analysis you have done.

By default you will need to video record your presentation and submit a link to it (panopto, youtube, etc.). If you would rather do your presentation in person, please email Dr. Yampolskiy to schedule a specific date/time.

- Hints (especially for in person option)
 - Practice giving your presentation
 - Work on getting the timing just right
 - If you are including a demo in your presentation make sure it works every time and just in case have a backup of all necessary components
 - Submit your presentation as Blackboard upload in MS PowerPoint format (and URL if video recording)

Due Date: 11/11
